

BUTTERFIELD LAKE  
Caswell, Aroostook County  
U.S.G.S. Fort Fairfield NW, Me. (7 1/2')

FISHES

Brook trout                      White sucker  
Minnows  
    Redbelly dace

Physical Characteristics

Area - 10 acres                      Temperatures  
  Surface - 69°F  
Maximum depth - 4 feet              4 feet - 66°F

Principal fishery: Brook trout

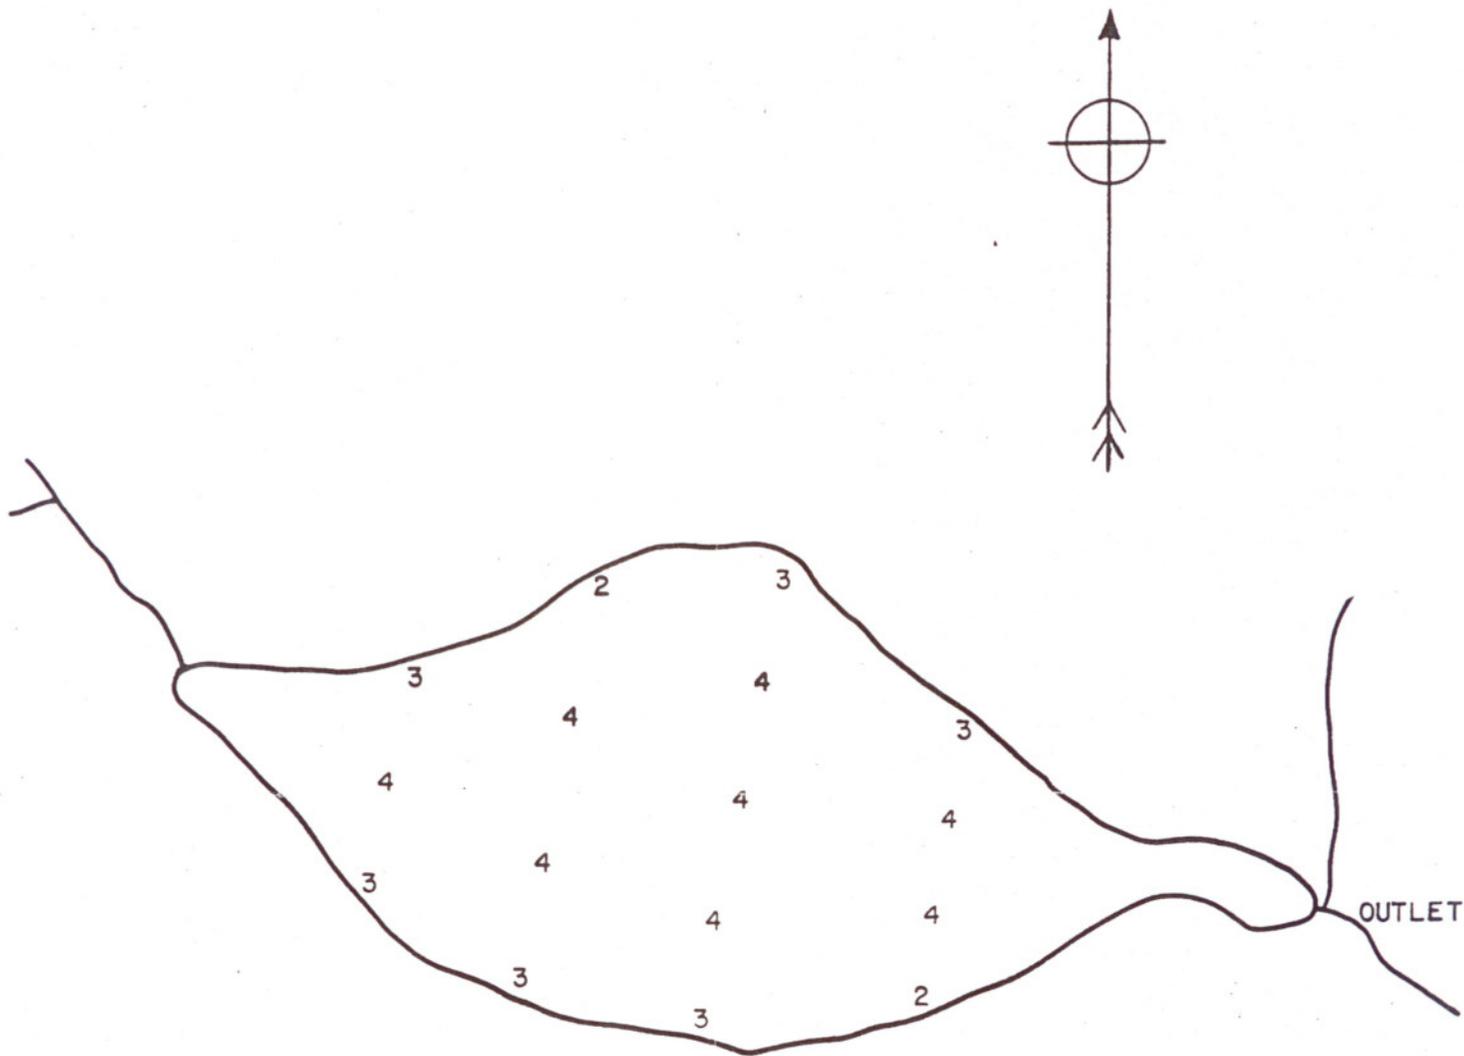

Butterfield Lake is shallow with nearly equal water temperatures from top to bottom. Trout migrate to spring areas when lake temperatures become warm.

Populations of suckers and minnows reduce trout production to some extent by competition. Chemical reclamation would increase trout survival and growth, but attainment of a complete kill would be difficult because of the boggy nature of the shoreline and the necessity of treating a long inlet brook.

Surveyed - August, 1957  
(Revised - 1994)
